Huffman Transferred to the Piatt County Jail .- Yesterday afternoon Marshal Haworth took John Huffman, the Milmine murderer, from this city to Monticello and lodged him in jail there. He went on the morning train by way of Rement. He met with a perfect oyation on the way, the deputs being thronged with people servious to see the prisoner, and at Cerro Gordo the crowd would not be satisfied until Marshal Haworth showed himself and prisoner on the platform. While waiting at Bement for the Monticelle train, crowds gathered at the depot. On their arrival at Monticello the station was througed with citizens of that place, and the city was alive with excitement over the arrival of the prisoner. IF YOU USE THE

DIAMOND ILLUMINATOR OIL!

The Diamond Oil will not give off an inflamable vapor under about 150 deg. and will not take fire under 175 deg., a degree of heat never given to Oil in the lamp. Hence it is absolutely SAFE. If the lamp is broken, or knocked over and spills out the Oil, the Oil puts out the flame of the wick. There never rises from it, in the lamp, an explosive vapor. Common Standard Kerosene ignites at 110 deg., but gives off an explosive vapor at 85 to 100 deg., and much is sold, where there are no

All the farmers were of the "well to do" sort, and some of them, who have turned their attention to fruits and market gardening, have grown rich. The soil is loam, varying from sandy to clayer, and surface gently undutait ig, intersected with small streams and occasional wet meadows, in which deposits of peat or muck are stored, sufficient to fertilize the whole upland surface, after it has been exhausted of its natural fertility.

face, after it has been exhausted of its harran fertility.

It is certainly one of the most extensive tracts, in an almost level position, and suitable condition for pleasant farming, that we know of this side of the Western prairies. We found some of the oldest farms apparently just as profitably productive as when first deared of forests fifty or a hundred years ago.

The geologist would som discover the cause of this continued fertility. The whole country is a marine deposit, all through the soil we found evidences of calcarcous substances, generally in the form of indurated calcarcous mariles, showing many distinct forms of aucient shells, of the terilary formation; and this marly substance is scattered all through the soil, in a very comminued form, and in the ereact condition most easily assimilated by such plants as the farmer de dires to cuttivate.
